

## The Student Conservation Association

### Frequency Counts

The following results are based on 1,067 completed telephone interviews among a nationwide random sample of respondents age 15 to 25. The interviews were conducted March 17 through April 1, 2021.

The theoretical margin of error for the total sample size of 1,067 is plus or minus 3 percentage points on questions where opinion is evenly split. The theoretical margins of error for any sub-groups will be larger. The results presented here have not been weighted.

The results in the column labeled 2020 are based on the survey conducted February 14 through 21, 2021.

31. For the purposes of this survey, let's define environmental justice (EJ) as the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations and policies.

Environmental injustice focuses on the disproportionate distribution of and exposure to environmental hazards such as landfills, hazardous waste facilities, and pollutants, whether intentional or unintentional, based on the socioeconomic composition of communities. It also includes inequitable access to natural areas and healthy food.

Based on these definitions, do you believe the American people are equally protected when it comes to exposure to environmental pollution and hazards, or not?
